DNS

DNS Administration

If you're running Samba as Active Directory Domain Controller, you also have to administer a DNS server. You will already find general information on the internal DNS and the BIND DLZ

 https://wiki.samba.org/index.php/DNS_Administration

Sur l'ADDC pour ajouter les entrées DNS :

```
sudo samba-tool dns add 192.168.254.29 supercompta.com traefik A 192.168.254.34
Password for [administrator@SUPERCOMPTA.COM]:
Record added successfully

nslookup traefik.supercompta.com
Server:    192.168.254.29
Address:   192.168.254.29#53

Name: traefik.supercompta.com
Address: 192.168.254.34

sudo samba-tool dns add 192.168.254.29 supercompta.com gitlab A 192.168.254.34
[sudo] Mot de passe de fabrice :
Password for [administrator@SUPERCOMPTA.COM]:
Record added successfully

sudo samba-tool dns add 192.168.254.29 supercompta.com nextcloud A 192.168.254.34
Password for [administrator@SUPERCOMPTA.COM]:
Record added successfully
```
